SocketService

service in module ANEXD

Description

SocketService provides an interface for sending and receiving websocket events. Also provides promises for sending then receiving a message on the same event.

Dependencies

- \$rootScope (api/ng.\$rootScope)
- \$q (api/ng.\$q)
- \$timeout (api/ng.\$timeout)
- CONST (api/CONST)
- socketFactory (api/socketFactory)

Methods

emit(event, val)

Sends a message on the provided event (also possible using socket.default.emit)

Parameters

Param	Type	Details
event	string ()	The event to send the websocket message on
val	string ()	Contents of message

promise(event, val, error)

Promises a response on the same event sent

Parameters

Param	Type	Details
event	string ()	The event to send the websocket message on
val	string ()	Contents of message
error	boolean ()	Whether to show errors on timeout (3 seconds)

Returns

string () Promise of the return message
