CO600: QA Overview
16 October 2015

Quality Assurance Overview

Form

The form below will be used for all QA testing. Document information at the top, declaring if the subject for testing is code or a piece of software engineering documentation. Tick boxes for which part of the project the document is from. If you are assessing code then delete the document standards table and only use the code standards table or visa versa. The coding convention section dictates which QA checklist specification you are using to assess the subject document.

Types

We will be creating a set list of documents which dictate a checklist for use during the QA stage. There will be separate documents for:

- JavaScript
- GoLang
- CSS
- SASS
- Documents
- Meeting Documents
- SQL

Possible additions to this list might occur during the project development.
