

Front End Setup Guide

To set up the ANEXD project on your system, you need to perform a series of steps.

Installing Dependencies

Install Node: <https://nodejs.org/en/download/>

(windows: install Ruby <https://www.ruby-lang.org/en/documentation/installation/#installers>)

Install Compass and Sass by opening a terminal prompt and typing:

```
gem install sass  
gem install compass
```

Next, install Bower and Grunt by typing:

```
npm install -g bower grunt-cli
```

Make sure you are in the 'web' directory, and update your local dependencies by entering:

```
npm install  
bower install
```

And you're set. Run the server using:

```
grunt serve
```
