CO600: Testing Overview
11 November 2015

Testing Overview

Near the end of the projects development we will move into a testing stage. During this stage we will be making sure all code and documents created meeting quality standards but also that the content of the code or documents meetings the scope through testing.

To do this we will use a set testing form to complete this. This form will allow for descriptions of the tests taken as well as the expected and actual outcome.

Testing Form			
Basic Details			
Item Name:			
Author:			
Item Description:			
Project Element:	Frontend:	Backend:	App:

Testing Cases			
Name:	Description:	Expected Outcome	Actualy Outcome
