9 March 2016

Frontend UX Designs

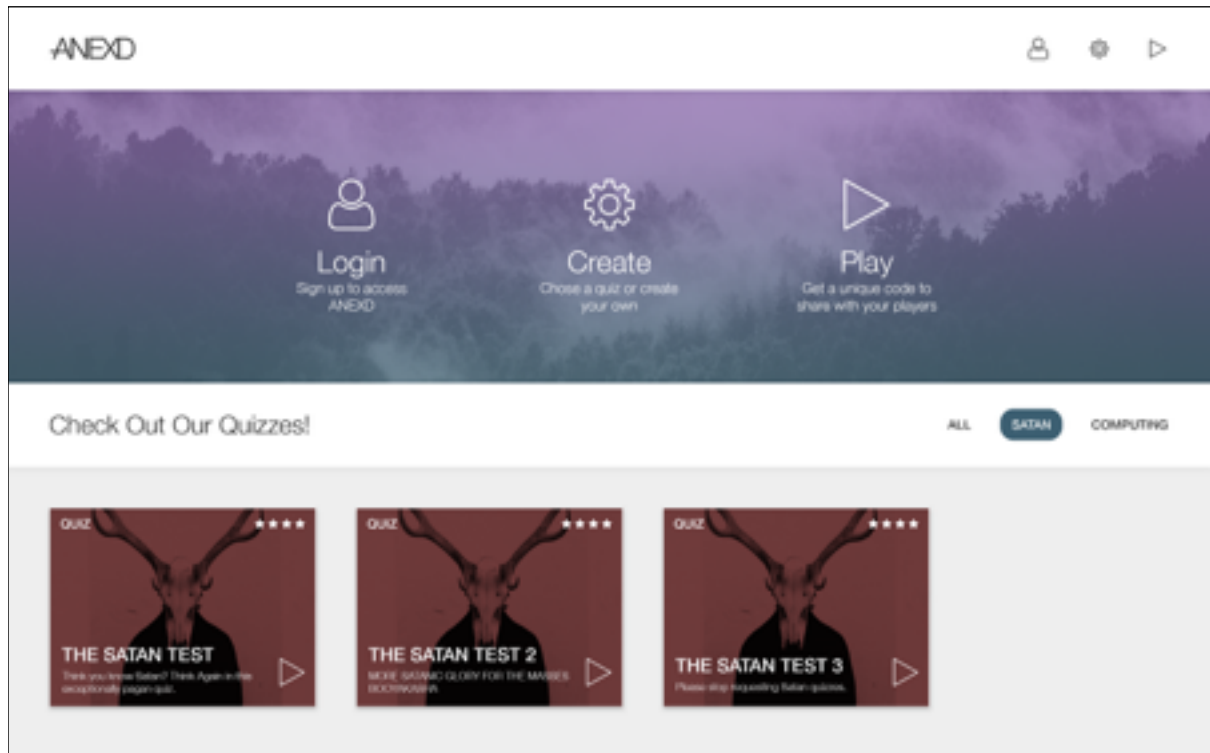

On completion of the project's front-end, we will have a number of screens that visualise the application flow.

The work required for the front-end will provide us with a desktop-suitable website for the creation and management of lobbies and applications, as well as a responsive mobile site for engaging with ANEXD applications.

Home

This is the initial landing page for desktop browsers. It outlines the capabilities of the project and provides routes for account management/login, available application browsing, and instant lobby launching.

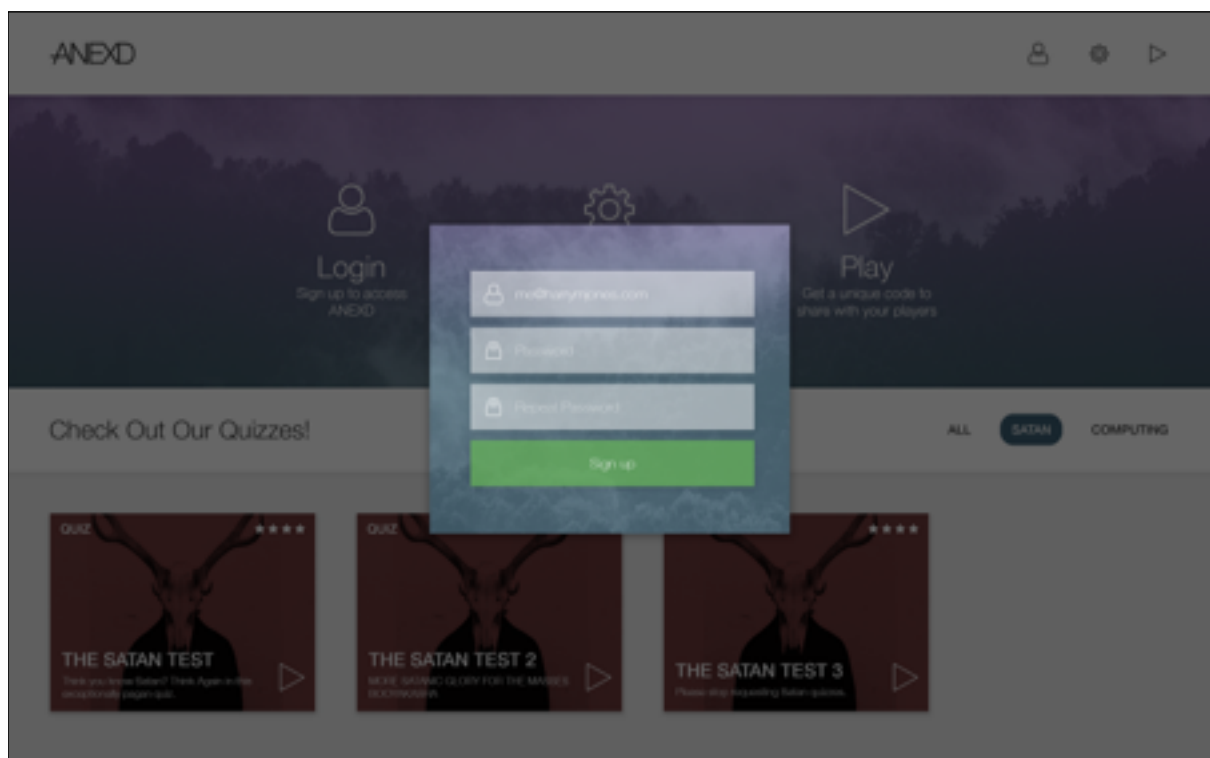

Login

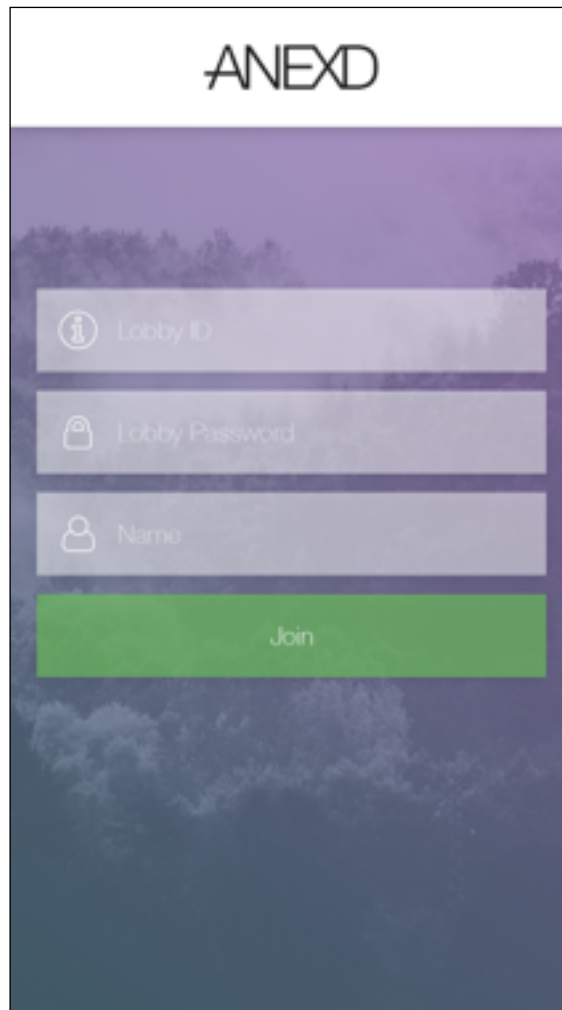

The modal used to allow existing users to login to their accounts. Using a modal allows us to trigger this capability on any screen if dual-logging or session errors occur.

Mobile-Home

The image shows a mobile application interface for 'ANEXD'. At the top, the brand name 'ANEXD' is displayed in a black, sans-serif font. Below the header is a large background image of a forest with a purple-to-blue gradient overlay. Three input fields are stacked vertically, each with a light gray background and a white icon on the left: a person icon for 'Lobby ID', a padlock icon for 'Lobby Password', and a person icon for 'Name'. A solid green button with the text 'Join' is positioned below the input fields.
