# SoundCloud Group Listener Readme

Abstract

The SoundCloud Group Listener App is an app for people to come together and critic music on SoundCloud. This could be their own tracks or other peoples. All they require is the SoundCloud track URL.
People join the lobby and can comment on the music via their mobile version.
A use case could be a use in music teaching within schools. Load up some music and quiz the students on it.
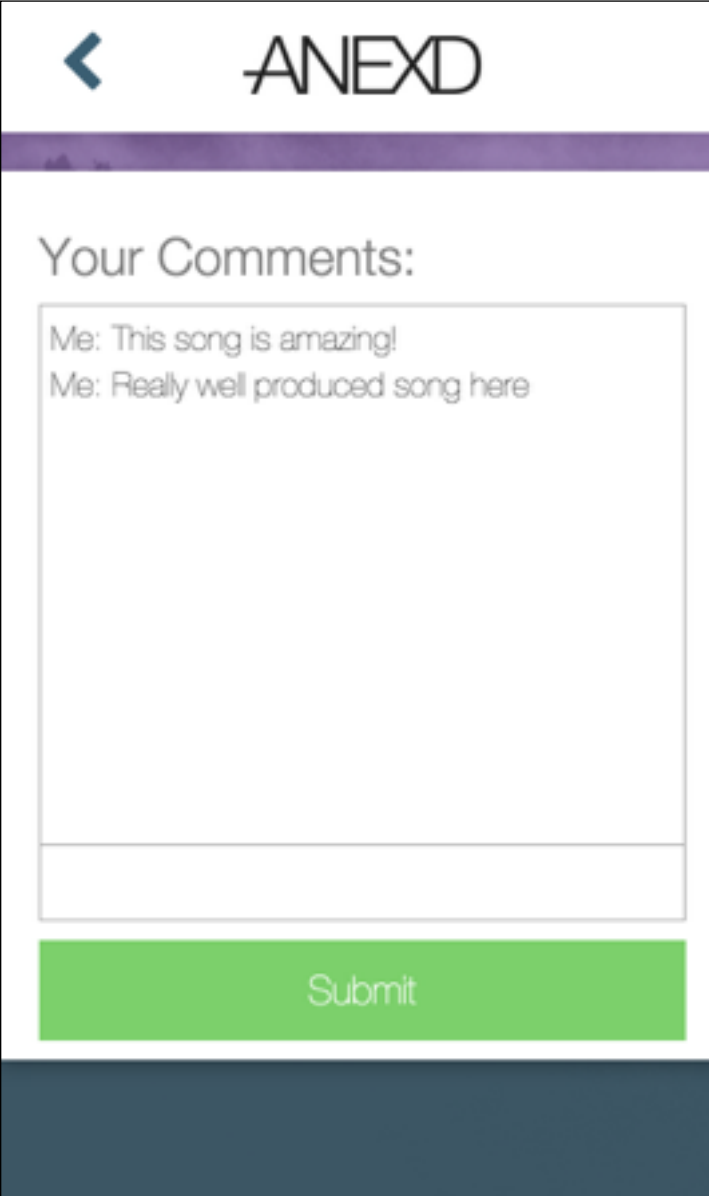

Desktop Screen

First screen is the desktop version of the applications.
On the left side tab we have our inputs for the song you wish to listen to on SoundCloud. Below this we have the chat.

Mobile Screen

The mobile version of the application contains two major parts. The first is the input and submit. Second is a display of every message the user has sent.
